Chislehurst Neurological Rehabilitation Centre

Chislehurst Neurological Rehabilitation Centre, London

Neurological rehabilitation service for adults with a brain injury or other neurological conditions

Capacity up to 15

All genders

Adults

Post-acute rehabilitation

Neuro-rehabilitation

On-site multi-disciplinary team (MDT)

At our newly opened Chislehurst Neurological Rehabilitation Centre in Southeast London, we have a strong focus on therapy, care and quality of life. We offer specialist post-acute rehabilitation, as well as management of long-term neurological conditions. We're committed to helping every person we support feel safe, happy, empowered enabling them to live their best life possible.

We offer slow stream rehabilitation providing the opportunity for residents to continue their rehabilitation through an adjusted intensity programme tailored to their specific needs. This flexibility accommodates resident's current needs and strives towards achieving their rehab goals.

We look to build on resident's progress with each resident having access to the multi-disciplinary team (MDT) including psychology, speech and language therapy, physiotherapy and occupational therapy. Support is also provided by experienced rehabilitation and therapy assistants.

Our team works closely with the individual and their family members along with liaising with general practitioners, social work professionals and solicitors or case managers to set goals around their physical progress, functional abilities, future independence, leisure and work activities and communication.

Our wonderful team understand that a holistic approach is necessary to ensure those in our care are safe, happy, and healthy. We promote and fulfil the company values of being caring, honest, pro-active, and empowering for those we support.

We are able to accept external placements as well as step-down or interim placements from our Blackheath Brain Injury Rehabilitation Centre.

We support those with/who require, but are not limited to:

- Brain injury
- Stroke
- Progressive neurological conditions
- Huntington's disease
