

Nottingham Brain Injury Rehabilitation Centre, Hucknall

Neurological rehabilitation service for adults with a brain injury or other neurological conditions

Capacity up to 59

All genders

Adults

Neuro-rehabilitation

Tracheostomy & respiratory care

Nursing

Therapy

Located in Hucknall on the outskirts of Nottingham, Nottingham Brain Injury Rehabilitation Centre specialise in the treatment, care and support of individuals aged 18 and over with physical and cognitive impairments as a result of brain injury or other progressive neurological conditions.

With three distinct, yet complementary services on one site, we offer flexible care options from our specialist on-site team.

Our clinical team is highly trained in the rehabilitation and care of adults with brain injuries and other neurological conditions.

They are supported by a team of housekeeping, catering, maintenance, and administration staff.

Patients are able to access local adapted swimming and hydrotherapy services and have various outdoor areas at the service to enjoy.

We have links with a local spasticity clinic allowing to support those who require Botox treatment.

Fernwood (22 beds) – High Dependency Rehabilitation

Fernwood is for individuals with particularly complex nursing care needs. Patients may have tracheostomies, required assisted ventilation, or may present with a persistent disorder of consciousness. We also care for individuals who may be in the end stage of a progressive neurological illness. Patients have access to input from the therapy team as standard. Individualised therapy or rehabilitation package tailored to individual needs and goals are also available. Fernwood is also able to provide tracheostomy weaning programmes on-site, where clinically indicated.

Millwood (23 beds) – Neurorehabilitation

Millwood is for patients who have undergone acute rehabilitation and require further therapy input to reach their optimum level of recovery. We provide a range of rehabilitation therapies to help people relearn and practice everyday skills to give them the best chance of a return home.

Hazelwood (14 beds) – Non-complex care and neurorehabilitation

While residents on Hazelwood have access to 24-hour nursing input from our diverse and skilled specialist nursing team, our primary focus on Hazelwood is the care and rehabilitation of individuals with no or low level nursing needs. The service is suitable for people who as a result of brain injury are unable to live at home independently, require round the clock support to manage everyday tasks, support to keep themselves safe and maintain their overall wellbeing and quality of life through performance and participation in activities of daily living and social and recreational activities. We can also offer bespoke rehabilitation and therapy packages from our specialist in-house therapy team.

Our outcomes and compliments:

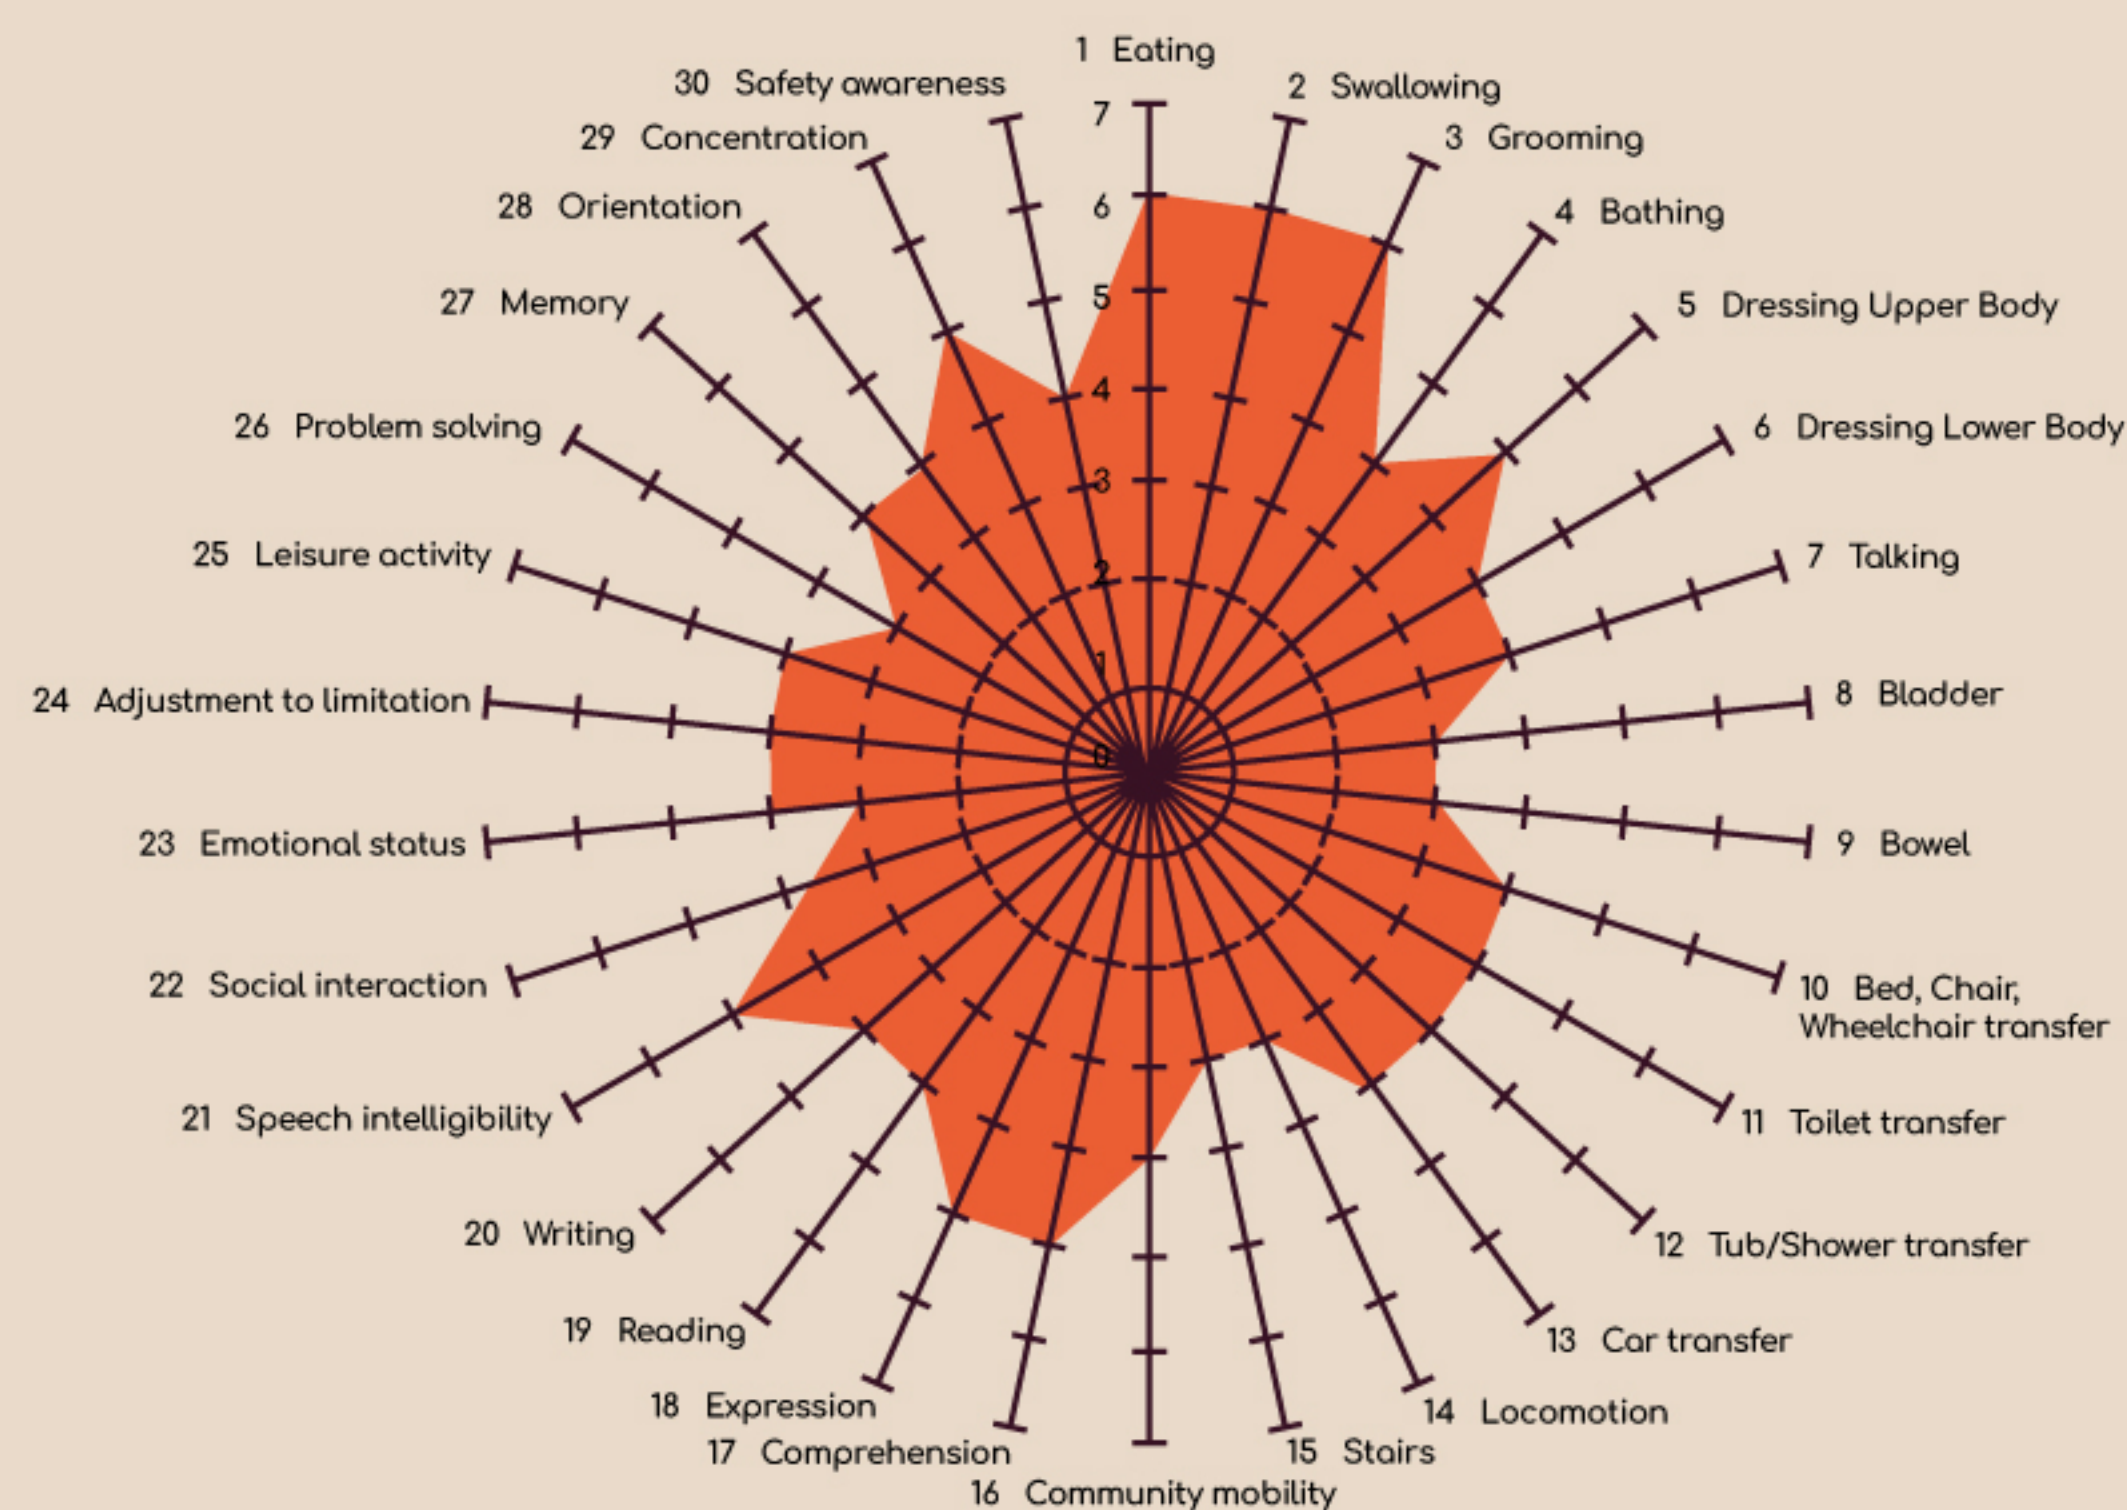

The Functional Independence Measure (FIM) and Functional Assessment Measure (FAM)

FIM + FAM is an outcome measure tool for those who are receiving rehabilitation following a brain injury. Its focus is on motor, cognitive, and psychosocial function. The graph below shows the average progression of 10 recent patients on admission and on discharge.

On admission

On discharge

"We are really grateful for all your hard work and support. He has achieved a lot more than we could ever have hoped for in the last few years. Thank you for everything"

Family Member

"The staff are an absolute pleasure to work with. They are very professional and proactive in providing care"

Staff member

"We appreciate the care which has been given. I will never forget you all – you have been an extension of my family. Your care has been very much appreciated and I can't thank you enough"
