

Kibblesworth, Gateshead

Neurological rehabilitation residential service for adults with complex needs

Capacity up to 16

All genders

Adults

Residential service

Neuro-rehabilitation

Access to a Multi-Disciplinary Team (MDT)

South to the Angel of the North and nestled in a lovely village, the Multi-disciplinary team (MDT) at Kibblesworth supports adults with acquired brain injuries or neurological conditions, who may also have a secondary diagnosis of mental health needs or learning disabilities, through their rehabilitation journey.

Rated 'Good' by the CQC, our purpose-build 16-bed neurological rehabilitation residential service offers easy access to a broad range of amenities, educational and occupational opportunities, as well as social and leisure pursuits, and has recently been decorated throughout to enhance the environment for residents.

We provide a tailored therapy programme for residents, which includes physiotherapy, occupational therapy, as well as speech and language therapy. Our focus is on delivering person-centred care and understanding the history, personality, likes and dislikes of the residents to help develop therapeutic relationships.

All residents are allocated a key worker who supports them to develop their own individualised timetables, support programme, as well as enable communication with significant others, and plan for events and holidays throughout the year.

Kibblesworth offers 15 individual bedrooms with en-suite bathrooms and one self-contained flat, a communal lounge, spacious dining room, a large conservatory, and an accessible garden, where residents may wish to socialise and enjoy nature at their own pace. There are specialist bathrooms allowing for residents of all abilities to use when needed, with staff always available. Our fully equipped therapy room features a therapy kitchen to aid with rehabilitation and is where residents can work with our sister company Neural Pathways on their tailored therapy programme.

We support those with but are not limited to:

- Brain injury
- Huntington's disease
- Multiple sclerosis (MS)
- Speech impairment
- Stroke and visual impairment
- Mental health needs
- Physical disabilities
